Insured Wage Totals Up \$41.6 Million In Fiscal 1970 For Total of \$745.7 Million

Employment and Wages Increase

An average of more than 125,000 workers employed in industries insured under Montana's employment security law were paid \$745,704,858 in wages during the fiscal year 1970. Wage totals were \$41.6 million above fiscal 1969 while the average number of insured workers increased by 1,623. Wage totals were up in all industry groups despite some slowdown in the construction and lumber industries because of tight money policies in the period covered by this summary.

Trade Posts Biggest Gain

Trade led all other industries in wage and job gains during fiscal 1970. Wage totals were up by \$14.5 million to a total of \$231.6 million while the yearly average employment increase was 1,190. Wage increases in other industries were in this order with fiscal wage totals followed by increases from fiscal 1969: mining, \$55.9 million, up \$7.2 million; service industries, \$74.2 million, up \$6.2 million;

contract construction, \$89.6 million, up \$4.6 million; finance, insurance and real estate, \$45.8 million, up \$3.1 million; transportation, communications and utilities, \$78.8 million, up \$3 million; and manufacturing, \$169.8 million, up \$2.9 million. In addition to job expansion in trade industries, average yearly employment was up in all other industries except manufacturing and construction where job totals were down 616 and 242 respectively from fiscal 1969 totals.

Average Yearly Wages: \$5,948

Construction edged out mining for the highest average yearly earnings per employee in fiscal 1970. Construction wages at \$8,491 were a shade above the \$8,474 paid to workers in the mining industry. Wages in service and miscellaneous industries at \$3,945 were at the bottom of the list. Average yearly earnings in all insured industries were \$259 higher than the fiscal 1969 total.

(3) Employers whose operations are not ascribed to an individual county, includes firms with unit or operations organized on a multi-county pattern and reporting as a single enterprise. Also included are some employers whose base operations shift from one location to another, such as construction contractors. During the Fiscal Year 1970, approximately 50 of the larger employers who reported by unit were broken-out into the counties. This activity increased the number of employers from fiscal 1969, and also decreased the multi-county employment and wages. The multi-county employers now represent only 7.3% of state total employment and 9.8% of total wages.

(4) Does not include employers who did not have employees during fiscal year. Employers are carried on Commission records until "none" reports have been received for two years.

County Wage Averages

Average earnings are derived from gross wages reported, divided by average number of employees on covered pay-rolls. Comparative figures for fiscal 1970 and 1969 appear below:
